Leaves No Child Behind

Leaving no child behind is a worthy goal. The reality is that some students have already fallen behind. Tutorsystems software helps these students by providing individualized assessment and instruction using a proven tutorial method. Tutorsystems software helps teachers by providing reports that show objective measurement of progress. Tutorsystems gives you the tools you need to help students individually, many students at a time.

Total Accountability

Easily create and maintain class rosters and student assignments with the Tutorsystems RecordKeeper. Display, print, or save student progress reports in just seconds. Monitor the status of all students currently on a network. Track true time-on-task down to the instructional objective level by excluding inactive time.

Motivates Students to Learn

As a student uses Tutorsystems software, an ever-expanding learning spiral evolves. The student **DEVELOPS SKILLS** through tutorials that are challenging but not frustrating. This achievement **PROMOTES CONFIDENCE**. This new confidence **IMPROVES ATTITUDE** and **PROVIDES MOTIVATION** to develop additional, more challenging skills. Skills are presented in a life-oriented context and move the student from lower order thinking skills to higher order thinking skills. Skill reinforcement is provided through the use of downloadable or optional hard-copy student manual and reproducible student worksheet selections.

Simple.

Effective.

Affordable.

Tutorsystems software helps seventh grade through adult students independently master basic skills in reading, grammar, and mathematics through this simple four-step process:

Tutorsystems software **TESTS** students to determine skill deficiencies, **PRESCRIBES** lessons to remediate the deficiencies, **TEACHES** students the required skills, then **TESTS AGAIN** to ensure skill mastery.

A True Tutorial System

Unlike other programs which use a drill-and-practice approach, Tutorsystems lessons automatically adapt to each student's progress and comprehension through logical branching sequences. Immediate feedback is provided to the student for each answer. Correct answers move the student forward through the lesson while incorrect answers lead the student to supplemental information and an explanation of the error. A mastery test at the end of each lesson verifies performance before allowing the student to proceed to the next lesson.

Online: School

Features & Benefits

Work from anywhere.

After school programs can leverage the Internet to enable students and teachers to work from home or wherever Internet access is available. The optional Online Tutor enables teachers and students to keep in touch via text and voice chat over the Internet.

Centralize data.

Monitor, manage, and report on student activity for multiple physical locations from any location.

Reduce dependence on local technology infrastructure.

LAN user accounts, passwords, and security permissions are not needed; only Internet access is required.

Improve security and recoverability of student data.

Student data is safely and securely maintained on the Tutorsystems host server. Daily backups allow recovery even in the event of user error.

Tutorsystems software installs and runs over the Internet.

Students and teachers can easily install Tutorsystems software directly from the Tutorsystems web site or from an optional CD.

Students can use even low-bandwidth Internet connections.

Dial-up users will have no complaints about speed.

Application software updates itself automatically.

Eliminate the logistical and financial burden of manual software updates. Enjoy new features as soon as they become available.

Teacher access is safeguarded by multi-level password security.

Ensure that student data and software configuration options are seen or updated by only authorized users.

New report types express student score data in your terms.

See student score data as it relates to many popular state standards and third-party assessments, in both detail and summary reports.

Prescription Builder assigns Tutorsystems lessons by your objectives.

Select a student, select the desired objectives, and the program automatically prescribes the appropriate Tutorsystems lessons.
